

RAP Stage I: Collaboration and Ideation Fund Guidelines

1. Overview of Funding

This fund is part of the Research Acceleration Programme (RAP) of the Te Tītōki Mataora MedTech Research Translator initiative.

The RAP Stage I Collaboration and Ideation Fund supports the formation of new collaborative relationships between researchers, clinicians, companies, and/or new collaborative relationships with Māori and Pacific communities. Inter-organisational collaborative behaviour is a strong push in the Te Tītōki Mataora MedTech Research Translator initiative and this funding recognises that new relationships are difficult to pursue, particularly when potential collaborators are in different centres throughout the nation.

This fund is for researchers from NZ universities, Te Whatu Ora, primary healthcare providers, independent research institutes (including CRIs), and/or Whānau Ora / Fonua Ola providers who also have a deep knowledge of the needs of their communities. The researchers have not formally worked together and want to build relationships, or they are existing collaborating groups wanting to pursue a new concept or build new relationships. There is an expectation that with the funding, the team will progress into a RAP Stage II Concept Seeding Project or other grants including HRC, MBIE, and Royal Society funds.

Projects of **up to \$20,000 (excluding GST)** are sought, typically for completion within a 12-month period from project start date. Funding should be used within New Zealand unless in exceptional circumstances. The requested funding should be allocated as outlined below:

- Up to \$10,000 may be used to bring potential collaborators together in focused meetings or curated workshops to explore new opportunities or ideation sessions. Funding for more than \$10,000 can be requested if there is a clear rationale. The funding covers travel support for researchers from different organisations to meet and visit one another's facilities, workshops, hui, or community consultations. In the case of projects that include or focus on such ideation sessions, the funding will extend only to explore the initial concept, and where no ethics is required; a detailed research plan suitable for applying for RAP Stage II Funding would be an expected outcome.
- An additional \$10,000 can be used to fund discrete activities arising from ideation sessions and/or which are required to move the research project forward to a robust RAP Stage II application. For example, funds could be used to develop and pilot a research protocol, to develop initial technology for a research project, to carry out an initial feasibility study, or to contract personnel (i.e. research assistant) for a specific task. These research activities should not require full ethics approval but expedited low-risk studies or studies (extensions) under existing ethics approval to test a new technology could be considered.

The funding does not cover student costs and does not include FTE time of PIs or AIs.

This is an open call for proposals. Applications may be submitted at any time, but funding is awarded every two months from February 2023 (see also Section 5).

Projects on medical and health technologies are welcome (see Section 3). There are some specific challenges that have been identified by the health system, and projects addressing these are also requested:

- **Long-term conditions pathway (Te Whatu Ora Priority):** Innovative solutions that address any stage along the pathway of long-term condition development, from early prevention through to enhanced care – for example, from early prevention of diabetes through to chronic kidney disease and transplant – that improve patients' health or quality of life and/or minimise health system burden.
- **Virtual/Digital Hospital (Te Whatu Ora Priority):** Any technology solutions that will help move and support healthcare into the community.

- **Whānau supporting Whānau (Whānau Ora Priority):** Technology solutions that empower whānau to support each other in the prevention, diagnosis and management of COPD, Cardiovascular disease or Diabetes in their homes and communities.

Projects will be contracted with the Project Team Leader’s organisation. The project start date is flexible but must be within 1 month of contracting.

Funded projects will be tracked and assessed against milestones and outcomes by the RAP Executive Team over its duration. The RAP advocates a fast-fail philosophy to ensure that we have a continuing pipeline of fresh ideas.

Reporting will be required at the completion of the project.

2. Capability Building Modules

Alongside the RAP, Te Tītoki Mataora MedTech Research Translator also offers modules for capability development through its Healthtech Capability Programme, which projects can access for specific support. These are:

- **Mātauranga Māori:** supports relationship building with Māori communities and organisations, and capability building for Māori researchers and students.
- **Pacific Engagement:** connections to Pacific organisations and community, capability building of Pacific researchers and students, and workshops and programmes to understand Pacific health and wellbeing requirements.
- **Future Leaders:** connections to early- and mid-career researchers’ networks and activities.
- **Clinical Translation:** connections to clinicians interested in translational research and innovation, workshops on clinical trial design, and clinical validation of technology.
- **Commercial Translation:** access to seminars on technology translation and commercialisation, workshops to understand regulatory requirements and market validation, and specialist advice to guide early-stage commercialisation strategies.

3. Project Eligibility Criteria

Projects must meet the following criteria to be eligible for funding:

- Projects must be a collaboration between at least two organisations. One of the organisations involved must be from the CMDT partnership (comprising AUT, Universities of Auckland, Canterbury, and Otago, Victoria University of Wellington, and Callaghan Innovation). The other organisation(s) may be any NZ university, Te Whatu Ora, primary healthcare provider, independent research institute (including CRIs), and/or Whānau Ora / Fonua Ola providers. While collaborators can be located within the same city, we strongly encourage forming networks across New Zealand as well.
- The project must be led by researchers at any of the organisations listed above.
- Clear reasons must be given as to why this collaboration is important to the medtech translational network, its goals, what it will achieve from this project, and next steps. In the case of existing collaborating groups, applicants must explain the new “stretch” to this collaboration. For example, explain if this involves the inclusion of a new group or collaborator; development of a new concept; or extension of the relationship to Māori and Pacific collaborators.
- A project plan to progress the collaboration or new idea is expected alongside a budget.
- Early/Mid-Career Researchers (EMCRs) and clinicians are encouraged to apply. The RAP Executive Team will prioritise applications from EMCRs that are PIs or co-PIs. Doctoral and Masters’ students are not eligible for this funding as it is focused on developing longer term goals and relationships to grow the translational

research community. However, students can be included in the meetings, workshops, and activities that the project will support.

- Industry collaborators can be a collaborator in the project, but funding may not cover the costs of their participation (e.g. travel or accommodation costs).

4. Evaluation and Funding

Applicants must complete the Proposal and Budget templates provided – these should outline the team applying and address the eligibility criteria in Section 2.

The RAP Executive Team will assess the proposals and decide on awards.

5. Funding Cycle

This is an open call for proposals and submissions can be made at any time. However, proposals are reviewed for funding by the RAP Executive Team once every two months in **February, April, June, August, October, and December**. Awards will be made by the 20th of these same months. All proposals should be submitted to medtechresearchnetwork@auckland.ac.nz by the due dates in the table below via the appropriate channels as required by the Project Leader’s organisation. Teams should ensure they adhere to their organisation’s funding application processes to avoid any delays. Proposals received after the due date will be considered in the next round of reviews.

2023 Deadlines

Proposals must be submitted by:	To be considered in:
12pm Tuesday 31st January 2023	February 2023
12pm Monday 27th March 2023	April 2023
12pm Monday 29th May 2023	June 2023
12pm Monday 31st July 2023	August 2023
12pm Monday 25th September 2023	October 2023
12pm Monday 27th November 2023	December 2023

6. Project Completion

Projects are expected to be completed by the contracted end date, typically with a maximum duration of 12 months.

Upon completion, project teams must provide:

1. A one-page report outlining the status of the relationship or ideation outcome, highlights on what has been achieved, and next steps for the newly formed relationship or concept; and
2. A short summary (up to 300 words) with photos/images of workshops for Te Titoki Mataora MedTech Research Translator social media posting, or a lead for a feature in the MedTech Bites newsletter.

This information will be used for annual reporting and communications to showcase Te Titoki Mataora MedTech Research Translator. The progress of the collaboration will be tracked over the life of the initiative.

The funding source (Te Titoki Mataora MedTech Research Translator) should be acknowledged in presentations and any media or formal communications.

7. Contact Information

All queries can be directed to medtechresearchnetwork@auckland.ac.nz.
