PhD position available within the CReaTE group, New Zealand:
A 4 year fully funded PhD project is available immediately in the CReaTE Group (University of Otago Christchurch), funded by the Medtech Centre of Research Excellence.

**Project: Biofabrication of scaffolds for skeletal regenerative medicine**

**Supervisors:** Assoc Prof Tim Woodfield, Dr Ben Schon, Dr Khoon Lim

**Project outline:**

Bone, cartilage and tendon are three musculoskeletal tissues where optimal repair or regeneration is often not achievable. This project will focus on strategies for successful orthopaedic tissue repair, particularly fabrication of novel scaffolds for bone, cartilage and tendon.

Additive manufacturing and 3D printing are shaping the future of orthopaedic surgery and regenerative medicine. Research within the CReaTE group focuses on the development of additive-manufactured orthopaedic implants and regenerative medicine strategies targeting repair of cartilage, bone and tendon for the treatment of musculoskeletal disease. Utilising a platform of 3D printing or biofabrication technologies we develop top-down and bottom-up tissue assembly approaches aimed at producing new classes of tissue engineered constructs for tissue repair.

Controlling delivery of stem cells and/or bioactive factors to enhance repair and regeneration, along with design and fabrication of scaffolds using additive manufacturing processes will be a key focus of this project. Application and testing of constructs will be carried out in relevant models, with the goals of improving on the current state of the art, enhancing understanding of the underlying biological processes, and progressing a repair strategy toward the clinic.

**Skills required:**

We are looking for enthusiastic PhD candidates with the following skills: Experience with 3D scaffold fabrication, *in vitro* cell culture, biomaterial characterisation techniques, biochemical analysis techniques, mechanical testing, computer-aided design, micro-CT imaging, and histology processing would be preferred. Good communication skills (both written and oral), as well as intrinsic motivation and independence are essential.

You will work within the CReaTE Group, a multidisciplinary research team of bioengineers, biologists and clinicians working at the interface of cell biology, biomaterials science and engineering. There will be significant opportunities for PhD candidates to interact with medical device industry partners as well as orthopaedic surgeons. You will work in close collaboration with partners within the NZ$26M MedTech Centre of Research Excellence ([www.cmdt.org.nz/medtechcore](http://www.cmdt.org.nz/medtechcore)), a national consortia of medical technology researchers and industry partners in New Zealand developing a translational research platform taking basic research toward application for economic growth and healthcare outcomes.
Qualifications:
Applicants must hold an Undergraduate and/or Masters degree in one of the following areas: Biomaterials & Tissue Engineering, Biofabrication, Bioengineering, Polymer Chemistry or other related biological sciences or engineering disciplines, and should have an ‘A’ grade average (or equivalent GPA).

Funding Arrangements:
A total of $34,000 ($25,000 stipend plus fees of approx. $8000) per annum for the duration of the 4-year PhD degree.

To Apply:
All candidates with high motivation, enthusiasm, and independent thinking are welcome to apply. High proficiency in English is essential, and must meet the requirements for English language proficiency of the University of Otago. Please send a copy of your full CV including references to publications/conference proceedings; copies of undergraduate/postgraduate academic transcripts; the names of two referees, and any other supporting information relevant to the project (e.g. lab/assay skills, software/hardware expertise) to tim.woodfield@otago.ac.nz by 10th January 2016.

Location:
The research will primarily take place at the University of Otago Christchurch. (www.otago.ac.nz/christchurch/study/postgraduate/#phd). Christchurch is a vibrant city based on the coast and close to the southern alps of New Zealand, with ample opportunities for outdoor activities locally including mountain biking, surfing, hiking and skiing. Christchurch was recently rated as one the world’s top 10 cities to visit by Lonely Planet (www.lonelyplanet.com/new-zealand/christchurch-and-canterbury/christchurch/travel-tips-and-articles/77531).
